The Emergency: AIDS, Extreme Poverty and Environment

Poverty exists everywhere, but it is most cruel and debilitating in developing countries, where more than one person in five subsists on less than \$1 day. There has been progress.

For more than 15 years the extreme poverty in developing countries has fallen from 28 percent to 21 percent. Over the same time population grew 15 percent to 6 billion people, leaving 1.1 billion people in extreme poverty. If economic growth rates in developing countries are sustained, global poverty will fall to 10 percent—a striking success. But hundreds of millions of people will still be trapped in poverty, especially in Sub-Saharan Africa and South Asia and wherever poor health and lack of education deprive people of productive employment; environmental resources have been depleted or spoiled; and corruption, conflict, and miss governance waste public resources and discourage private investment. Even as the first target of the Millennium Development Goals appears in sight, the effort to eliminate poverty must be renewed.

More than 1 billion people around the world live on less than \$1 a day.

A child dies every three seconds from AIDS and extreme poverty.

Africa has been hit harder by the HIV/AIDS virus than any other region of the world.

Sub-Saharan Africa is home to over 70% of the total world HIV-positive population. Over one billion people do not have access to clean water.

Fight Extreme Poverty and AIDS

- Extreme poverty means living on less than \$1 a day, one in five people around the world survives on this amount, over 1 billion people live on less than \$1 a day, with nearly half the world's population (2.8 billion) living on less than \$2 a day
- 50,000 people die every day from extreme poverty;
- 600 million children live in absolute poverty;
- One in four people on earth doesn't have access to clean drinking water;
- 40 million people are living with HIV/AIDS worldwide;
- Natural disasters and climate changes are setting back development efforts around the world;

Stop AIDS

- Prevent 10 million children from becoming AIDS orphans;
- Help get 104 million children into grade school;
- Provide water to almost 900 million people around the globe;
- Save almost 6.5 million children under 5 from preventable deaths, Build a better, safer world for all.

Save Our Earth

- We need to Save Our Earth... The Sustainable Development can be ensured only by protecting the environment and using its resources wisely. Poor people, often dependent on environmental resources for their livelihood, are the most affected by environmental degradation and natural disasters (fires, storms, earthquakes, climate change, hurricanes) whose effects are worsened by environmental mismanagement.
- Most countries have adopted principles of sustainable development and agreed to international accords on protecting the environment. But good intentions are not enough. Around the world land is being degraded. Forests are being lost, fisheries overused, plant and animal species are becoming extinct. The carbon emissions are leading to climate change, we need to act decisively, our planet is suffering and mankind created, and man has to resolved.
- Rich countries are major consumers of products from the environment. Thus rich countries and poor countries alike have a stake in using environmental resources wisely.

You Can Make the Difference !

The WFWO is playing a catalytic role to meet the challenges of development head-on by developing a programs to respond to global development issues, and working closely with our partners and founders, at all levels, nationally and international to support to people in developing countries to enable them to over come their poverty and live in dignity.

The WFWO and its partners focusing in the most important issues; is the people, and human rights and justice, AIDS orphans, farmers, indigenous communities, women's groups, unions, fishing villages, the urban and rural poor, the homeless, those impacted by natural disasters, children without access to education, those lacking health care, cooperatives, and many more in their quest for global and humanitarian development project for a better world.

To strengthens our global partnership with the NGOs in Africa, Asia, Pacific, Americas and Caribbean that are already making a real difference in their communities.
