Feasibility Study Project Proposal Requirements

Preparing an objective and a well-researched feasibility study can be crucial to the success of the project focusing on the UN 2030 Agenda SDGS 17 and sustainable development projects in developing countries, including, social housing and basic services, and infrastructural facilities.

The feasibility study should include but not limited to:

1. Executive Summary

The executive summary should outline the description of the project and explain the problem or the opportunity to be covered and analyzed, in addition to the total cost and benefits calculated using the economic methods.

2. The Country and Sector

The study should provide a complete picture of the country including but not limited to:

- Governance System, Economic Laws, Strategic Plans, Economic and Social Indicators, Market Regulations, etc.

3. The Project

The study should provide full information about the project including but not limited to: Description, Objective, Justification, Linkage to the Country Strategy, Social/ Environmental Assessments, Construction Details, and Total Cost (capital, maintenance, operations).

4. Economic and Financial Assessment

The Economic analysis should determine the expected economic performance for the suggested project, and should assess the sensitivity of the performance and benefits to the variation in the inputs and outputs assumptions using the generally accepted measures for the project and population aspect.

- The Objective of the financial analysis is to evaluate

the viability and the impact of the project from a financial aspect, in addition to providing information about the operations, funding strategy, and the financing structure (preferably with no financing gap).

5. Environmental and Social Impact Assessment

The Social Assessment should take into consideration the project effects on the population in its area, and how it can add to the standards of living of the people.

- The Environmental Assessment should cover the likely effects of the project on the environment (positively and negatively)

6. Annexes

Are required whenever needed (maps, statistics, etc.).
